* As an ENERGY STAR® Partner, we have determined that these firing rates meet the ENERGY STAR guidelines for energy efficiency.

1 Burner input based on No. 2 fuel oil with a heating value of 140,000 Btu per gallon.

2 Net I=B=R water ratings based on an allowance of 1.15.

3 Net I=B=R steam ratings based on an allowance of 1.333.

4 Consult factory before selecting a boiler for installations having unusual piping and pickup requirements, such as intermittent system operation, extensive piping systems, etc.

5 Output is Heating Capacity for models with inputs <300 MBH and Gross Output for models with inputs <300 MBH. Heating Capacity and Annual Fuel Utilization Efficiency (AFUE) ratings are based on U.S. Government tests, with 13% CO₂ and -0.02 w.c. draft over fire. Before purchasing this appliance, read important information about its estimated annual energy consumptions or energy efficiency rating that is available from your retailer.

6 Combustion efficiency, thermal efficiency and gross output are determined in accordance with The Hydronics Institute's Testing and rating standard for Heating Boilers; @ 12.5% CO₂ and -0.02 w.c. draft over fire.
